PROJECTS EXPERIENCE

STORAGE API

Made it with **nodejs**, using **google cloud** to host the api, storage the files in **cloud Storage**, working with Streams, **prisma** as ORM, **Mysql** to save the user data and files data and **Stripe** for the subscription and plans. Made it to be Hosting using **Compute Engine** Google Cloud.
You can find more info in My Github repository

ECOMMERCE API

Using almost the **same Technologies that the storage api**, including **oauht2** login and register with google, **mongoose** as Orm, **MongoDB** as the Database and **sendgrid** to email validations. Made it to be Hosting using **App Engine** Google cloud.
You can find more info in My Github repository

WORKFLOW API

Using The Same Technologies that use Ecommerce Api
You can find more info in My Github repository

ECOMMERCE AND WORKFLOW FRONTEND

Made it with React, styling with tailwind and consuming my Ecommerce Api and Workflow Api, Using Redux, And Hosting on Firebase.
Eccomerce Repository __ Workflow Repository

SKILLS

- **Adaptation to the situation**, I was in several situations where a member or several of my team left it, so I had to make up for their absence.

- **Responsability**, i allways reach my tasks on the period of time given.

- **Comunication**, in almost all the projects were i had the oportunity to work on, i take the rol of leader, easing the tools and workspace to keep a good cordination and administration, so with that experience i learned how important is the comunication with my team and coworkers.
